

PROTECTOR Ball

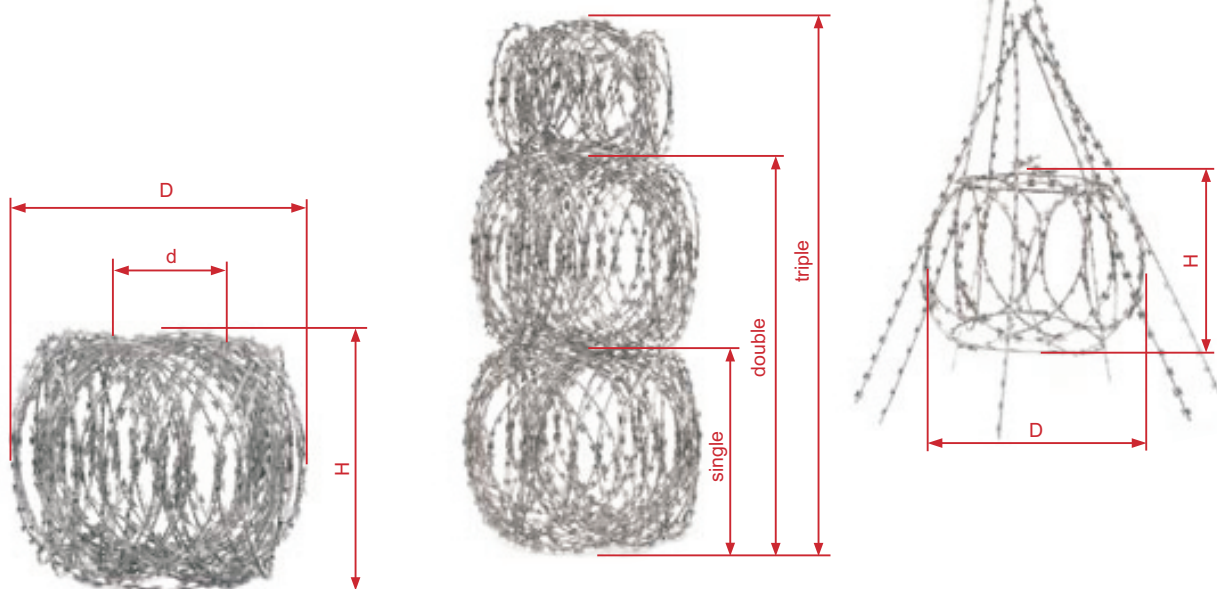

Spherical entanglements **PROTECTOR Ball** are simple and effective barriers, made of razor barbed tape with optional diameters and heights, composed of flat coils PROTECTOR Flatwrap, which are point-wise connected with the use of special galvanized steel clips.

The entanglements rolled in a unique way form a very efficient three-dimensional obstacle.

This type of entanglements can effectively secure important protection points, gates and passages. It can be also installed on vertical gate constructions or lighting posts, preventing overcoming of vertical obstacle by intruder.

PROTECTOR Ball

The diameters and heights of entanglements **PROTECTOR Ball** are delivered according to customer's needs.

There are no limits concerning the sizes of built structures. The size can vary depending on the number of **PROTECTOR Balls** used and clipped on the flat surface or in the form of vertical pyramids.
